

# Temperature chart recorder

"one trip"

transportation

storage

reliable

## DESCRIPTION

This instrument is a highly reliable, strip chart time and temperature recording instrument used to record environmental conditions encountered during storage and transportation of food, pharmaceuticals, chemicals, and other temperature-sensitive commodities in refrigerated trucks, rail cars, ocean and air freight containers.

The Temperature Recorder models are specially engineered with a light and durable vented case for superior air circulation and faster temperature response. They provide maximum accuracy and generate a permanent record of transit conditions on a strip chart. A view port allows the operator to visually confirm activation after the startup tab has been pulled.

The permanent records produced by these recorders serve as corroborating evidence for insurance claims, quality assurance documentation and protection of your valuable products.

## AVAILABLE MODELS

- 46891 - max 7 days - temperature range: -25;+35°C
- 46892 - max 30 days - temperature range: -25;+35°C
- 46893 - max 60 days - temperature range: -25;+35°C
